SUMMARY

Software & Cloud Engineer experienced in building scalable, secure web applications and cloud infrastructure across AWS and Azure. Skilled in software development, cloud architecture, DevSecOps, Infrastructure as Code (IaC), and CI/CD automation. Strong background in integrating security controls, vulnerability management, and cloud security best practices to deliver reliable, high-performing applications and secure cloud environments.

SKILLS

Programming: Typescript, Dart, Python, PHP
Web Technologies: Node.js, WordPress, Laravel
DevOps & Infrastructure: Linux, Docker, Terraform, CloudFormation, AWS CDK, SAST, DAST
Cloud Security: AWS IAM, Network Security, KMS, S3 Security, AWS Security Hub, Azure Sentinel
Security Operations & Monitoring: Threat Hunting, Vulnerability Management(Qualys), SIEM (Sentinel, XDR), Cloud Workload Monitoring, Incident Detection & Response.
Security Domains and Compliances: NIST, CIS Benchmarks, SOC2, STRIDE, MITRE ATT&CK.
Certifications:

- Certified Ethical Hacker (CEH)
- AWS Solution Architect (SAA-C03)
- AWS Certified Security - Speciality
- Google Certified Cybersecurity Analyst
- Microsoft Certified Azure AI Specialist

PROFESSIONAL EXPERIENCE

Cloud Engineer
Solecurity (Freelancer)

- Designed and implemented scalable, highly available cloud architectures on AWS, leveraging EC2, VPC, IAM, and load balancers to optimize application performance and infrastructure reliability.
- Architected and deployed scalable AWS cloud infrastructure using Terraform, CloudFormation, and AWS CDK (TypeScript), automating resource provisioning and improving deployment consistency across environments.
- Implemented automated PR checks, branch protection rules, and approval workflows to enforce secure development practices and improve code review efficiency with Github Actions.
- Implemented AWS security monitoring using CloudWatch Logs, CloudTrail, and IAM policies to strengthen audit visibility, detect suspicious activity, and enforce least-privilege access.
- Engineered reusable AWS CDK constructs and Terraform modules to standardize infrastructure deployments, improve code maintainability, and support scalable cloud architectures.
- Automated Linux-based EC2 administration using Bash and Python scripts, streamlining server provisioning, configuration management, and infrastructure maintenance.
- Implemented AI powered secure SDLC scanning with secret detection, IaC & container scanning, triage and threat modeling

Software & Cloud Engineer ***May2023-date***
Edelman Inc Canada (Full time)

- Migrated CI/CD pipelines from Atlassian Bamboo to GitHub Actions, integrating automated security controls and vulnerability scanning to improve deployment efficiency by 40% while strengthening pipeline security.
- Conducted penetration testing, vulnerability assessments, and automated security scanning across up to 30 websites and web applications, identifying, prioritizing, and remediating security vulnerabilities to strengthen application security and reduce cyber risk.
- Collaborated with platform teams to embed security-by-design and improve compliance readiness (NIST CSF, CIS Benchmarks).
- Acted as a security advocate, documenting risks, supporting audit requests, and guiding engineering teams on secure SDLC.

Senior Software Engineer (Security) ***Jan 2022- Dec 2022***
Guaranteed Network Canada(Remote)

- Embedded secure coding standards and threat modeling into cross-functional product teams using Laravel + React.
- Conducted vulnerability assessments and integrated Qualys and BurpSuite scanners into development pipelines.
- Built secure REST APIs using OAuth2, API logging, and rate limiting.
- Secured Flutter-based applications with encrypted API communications and protection of PII and health data.
- Performed DAST, logic reviews, and mentored junior developers on secure coding and GitOps practices.

Lead Software Developer ***Nov 2020 - Dec 2021***
ExRx.net LLC U.S.A(Remote)

- Developed and maintained secure REST APIs with Laravel Sanctum & Passport OAuth, implementing rate limiting and access logging.
- Deployed a multi-platform fitness app using Flutter with encrypted API communications to protect PII and health data.
- Conducted DAST and business logic security reviews for all external-facing apps and services.
- Mentored junior developers on secure Git workflows, code reviews, and compliance with internal coding standards.

Full-Stack Developer ***Jan 2020 - Oct 2020***
ABC Hosting Ltd. Poland (Remote)

- Developed secure cryptocurrency solutions using Django, Symfony, and Vue.js, RabbitMQ, Kafka.
- Implemented Docker-based containerization in CI/CD to improve deployment security, isolation, and consistency.

EDUCATION

Obafemi Awolowo University Ile Ife, Nigeria 2006-2011 Bachelor of Science in Electronic and Electrical Engineering
March 2012
Area of Specialization: Instrumentation and Control
Thesis: Design and fabrication of a humanoid robot.
CGPA: 3.68/4
