Toronto, Ontario. Canada

SUMMARY

Software & Cloud Engineer experienced in building scalable, secure web applications and cloud infrastructure across AWS and Azure. Skilled in software development, cloud architecture, DevSecOps, Infrastructure as Code (IaC), and CI/CD automation. Strong background in integrating security controls, vulnerability management, and cloud security best practices to deliver reliable, high-performing applications and secure cloud environments.

SKILLS

Programming: Typescript, Dart, Python, PHP
Web Technologies: Node.js, WordPress, Laravel
DevOps & Infrastructure: Linux, Docker, Terraform, CloudFormation, AWS CDK, SAST, DAST
Cloud Security: AWS IAM, Network Security, KMS, S3 Security, AWS Security Hub, Azure Sentinel
Security Operations & Monitoring: Threat Hunting, Vulnerability Management(Qualys), SIEM (Sentinel, XDR), Cloud Workload Monitoring, Incident Detection & Response.
Security Domains and Compliances: NIST, CIS Benchmarks, SOC2, STRIDE, MITRE ATT&CK.
Certifications:

- Certified Ethical Hacker (CEH)
- AWS Solution Architect (SAA-C03)
- AWS Certified Security - Speciality
- Google Certified Cybersecurity Analyst
- Microsoft Certified Azure AI Specialist

PROFESSIONAL EXPERIENCE

Cloud Engineer ***Sept 2025-date***
Solecurity (Freelance Contractor)

- Designed and deployed AWS cloud infrastructure using EC2, VPC, IAM, Application Load Balancers, and Terraform.
- Implemented AWS IAM security for a fitness-tracking startup using AWS Organizations, MFA, and least-privilege access controls.
- Migrated a healthcare patient portal to Terraform and Infrastructure as Code (IaC), automating cloud resource provisioning.
- Built reusable Terraform modules and AWS CDK(Typescript) constructs to standardize infrastructure deployments and configurations.
- Integrated DevSecOps security controls into GitHub Actions, including SAST, secret scanning, IaC scanning, and threat modeling.
- Configured AWS CloudTrail, CloudWatch, and IAM policies to strengthen security monitoring, auditing, and access management.

- Automated AWS Lambda functions with Python and EC2 administration with Bash scripts to streamline cloud operations.

Full Stack Software Engineer (DevSecOps) ***May 2023 – Present***
Edelman Inc., Canada (Full-time)

- Managed cloud infrastructure and security operations for 30+ high-traffic WordPress websites, ensuring availability, performance, and secure deployments.
- Led vulnerability management and penetration testing, identifying, prioritizing, and remediating security risks across web applications and cloud environments.
- Implemented WordPress security hardening, patch management, and vulnerability remediation, securing plugins, themes, core components, and server configurations.
- Migrated CI/CD pipelines from Atlassian Bamboo to GitHub Actions, integrating automated security scanning and improving deployment efficiency by 40%.
- Engineered and optimized cloud deployments and infrastructure configurations, strengthening application reliability, scalability, and security.
- Conducted DAST, API security testing, and business logic assessments to identify authentication, authorization, and application vulnerabilities.
- Collaborated with engineering and platform teams to implement secure SDLC, security automation, and compliance controls aligned with NIST CSF and CIS Benchmarks.

Senior Software Engineer ***Jan 2022- April 2023***
Guaranteed Network Canada(Remote)

- Spearheaded the end-to-end development of a campaign donation platform using Laravel and React, building scalable backend services and secure payment workflows.
- Developed and maintained GroupKit.com, a Facebook group management platform, using Laravel, React, and RESTful APIs to support third-party integrations.
- Engineered secure RESTful APIs with OAuth2 authentication, rate limiting, access logging, and data protection controls.
- Conducted vulnerability assessments, DAST, and business logic testing using Qualys and Burp Suite to identify and remediate application security risks.
- Integrated security testing into CI/CD workflows and mentored developers on secure coding, threat modeling, and secure SDLC practices.

Lead Software Developer ***Nov 2020 - Dec 2021***
ExRx.net LLC U.S.A(Remote)

- Led the architecture and development of a Flutter fitness application, building scalable, reusable components and integrating cloud-ready backend services.
- Developed secure RESTful APIs using Laravel, implementing Sanctum authentication, RBAC, and scalable backend service architecture.
- Strengthened API and cloud security through rate limiting, access logging, HTTPS encryption, and secure authentication workflows.
- Performed DAST and business logic security assessments to identify and address authentication, authorization, and API vulnerabilities..

Full-Stack Developer ***Jan 2020 - Oct 2020***
ABC Hosting Ltd. Poland (Remote)

- Developed and maintained minte.com , a microservices-based cryptocurrency application using Django, Symfony, Vue.js, RabbitMQ, and Apache Kafka.
- Resolved critical Kafka connectivity issues between microservices, restoring reliable communication and improving application stability.
- Investigated and fixed QA-reported bugs, troubleshooting backend APIs, asynchronous messaging, and service integration issues.
- Implemented Docker containerization and CI/CD practices to improve deployment consistency, service isolation, and application security.

EDUCATION

Obafemi Awolowo University Ile Ife, Nigeria 2006-2011 Bachelor of Science in Electronic and Electrical Engineering
March 2012
Area of Specialization: Instrumentation and Control
Thesis: Design and fabrication of a humanoid robot.
CGPA: 3.68/4
